

Flossbach von Storch - Multiple Opportunities II - I

INVESTMENT STRATEGY

The fund pursues an active investment approach. The fund manager can invest in any investment classes that, in his opinion, appear to be attractive in the relevant capital market environment. The basic principle for asset allocation is an idiosyncratic, independent view of the world that is modelled from economic, political and demographic parameters and is under constant review. A thorough company analysis is performed to assess whether an individual investment is attractive. A determining factor for each investment decision is the risk-reward ratio. The potential for yield must considerably overcompensate for any risks of loss. The portfolio structure, and thus the fund's risk-reward profile, is aligned to the five Flossbach von Storch pentagram pillars, particularly the diversification principle. The fund is deliberately not oriented to any index. The main aim is to make attractive yields on a permanent basis. The sub-fund is actively managed. The fund manager determines, regularly reviews and, if necessary, adjusts the composition of the portfolio exclusively in accordance with the criteria specified in the investment policy. The sub-fund is not managed in reference to an index.

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services.

Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.

The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance.

Past performance is not a reliable indicator of future performance.

MONTHLY COMMENTARY

December marks the end of a good year for equities. Although at the beginning of the month both the new virus variant Omicron and ambitions of central banks to curb inflation caused some uncertainty, the balanced statement by the chair of the US Federal Reserve, Jerome Powell, in the middle of the month was positively received by the capital markets. On the one hand, the population had learned to live with the Coronavirus. On the other hand, the strong economy justifies the reduction of bond purchases until March in order to fight high inflation, Powell said. However, a major mistake of raising interest rates too quickly will most likely be avoided in the USA after the experiences of 2013 and 2018.

Inflation in the USA rose to 6.8% in November, its highest level in almost 40 years. Prices in the eurozone also climbed by 4.9% year-on-year in the previous month. Gold, in euro terms, rose by 2.8% in December, ending the fourth consecutive year with a gain (driven by a strong US dollar). Bonds were slightly down in December. 10-year US Treasury yields ended the month at 1.51%, still below their March high of 1.77%. Equities, which have already made significant gains throughout the year, were also the best performing asset class in December. The global MSCI World equity index rose by 3.2% in euro terms. In the portfolio, consumer stocks such as Nestlé and Pepsi made the largest profit contributions. Gold (non-physical) and gold miner Newmont also contributed to the increase in value. Negative contributors included technology companies Salesforce, Etsy and Pinterest.

The portfolio contained more US stocks at the end of December than a year ago. This should be understood as a consequence of company selection and not as a region-related trade-off. Our equity allocation of 82.1 % is historically high, at the same time we no longer hold bonds in the portfolio. Despite the good performance in recent years, we still consider equities to be the most attractive asset class in terms of risk-reward ratio. We allocate our holdings across different sectors and thus aim to reduce dependence on individual investment themes. Gold, with an exposure of 9.5 %, aims to protect the value of assets under management against inflation, assuming that, as the Fed expects, it is no longer merely "transitory" and could have a sustained impact on the capital markets.

Flossbach von Storch - Multiple Opportunities II - I

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK/RETURN PROFILE

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium fluctuation, therefore the profit potential and loss exposure may be moderate. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
